BRIEF

Design a personal portfolio website for Pat, a DLSU student, co-founder, and builder at the intersection of art and science. The site should feel like it was made by someone who thinks in systems but feels in design — not a developer's portfolio, not a designer's portfolio, but something that refuses to be one or the other. Dark, confident, editorial. Has a point of view. Not safe.

ABOUT PAT — use this as the source of truth for all copy

Hero description, written in first person:

"At the intersection of art and science."

Values that should come through in the design itself, not just the copy: passion for design, building products that actually resonate with people, and living at the intersection of art and science. These aren't things to put in a bullet list — they should be felt in how the site is structured and how it moves.

VISUAL DIRECTION

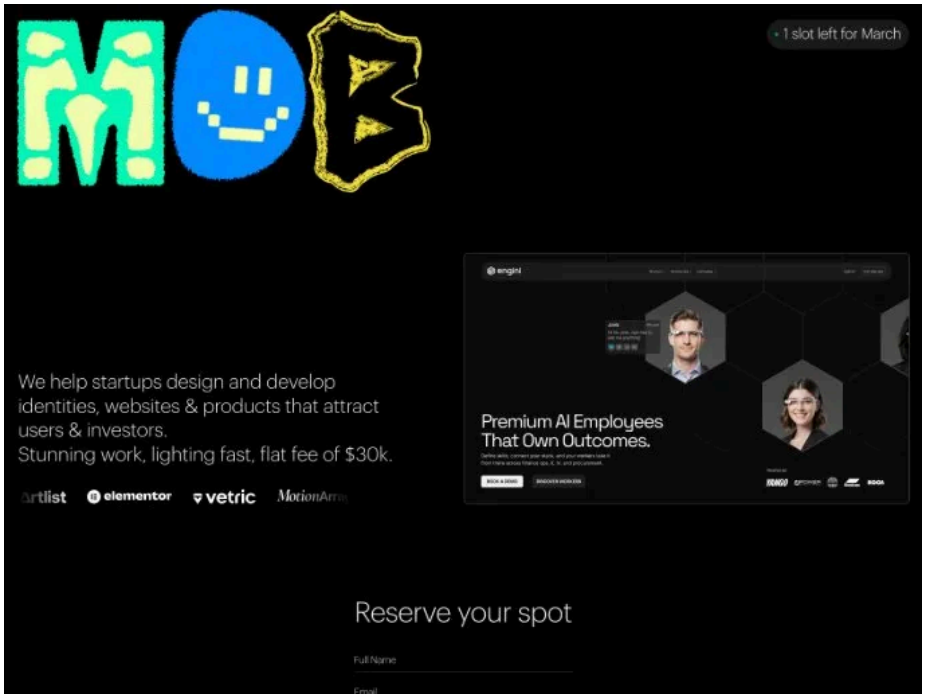
Primary reference:

This is the energy. Dark background, near-black with a hint of warmth. A large, dominant visual element in the hero — ideally Pat's photo treated with a high-contrast duotone or halftone filter, almost like a newspaper print or a screen-printed poster. The photo shouldn't feel like a LinkedIn headshot. It should feel like album art.

Secondary reference:

Bold graphic shapes, high contrast, editorial confidence. Use this for section breaks and visual moments between content — not as the primary aesthetic but as punctuation.

Tertiary reference:



Confident layout, work shown prominently, nothing decorative that doesn't serve a purpose.

Color palette: Near-black background (`#0D0D0D` or similar). Off-white or warm cream for primary text. One electric accent — not green (that's Merkana's color), not blue. Consider electric yellow, hot white, or a muted red-orange. The accent should feel like a highlight marker on a dark page.

Typography: Mix of two typefaces only. A bold, wide sans-serif for headlines — something with presence, not neutrality. Consider Space Grotesk Bold (consistent with Merkana), or a display sans like Syne or Clash Display. A monospace typeface for secondary text, labels, and metadata — this brings in the terminal energy from Image 2 without overwhelming. Consider JetBrains Mono or IBM Plex Mono.

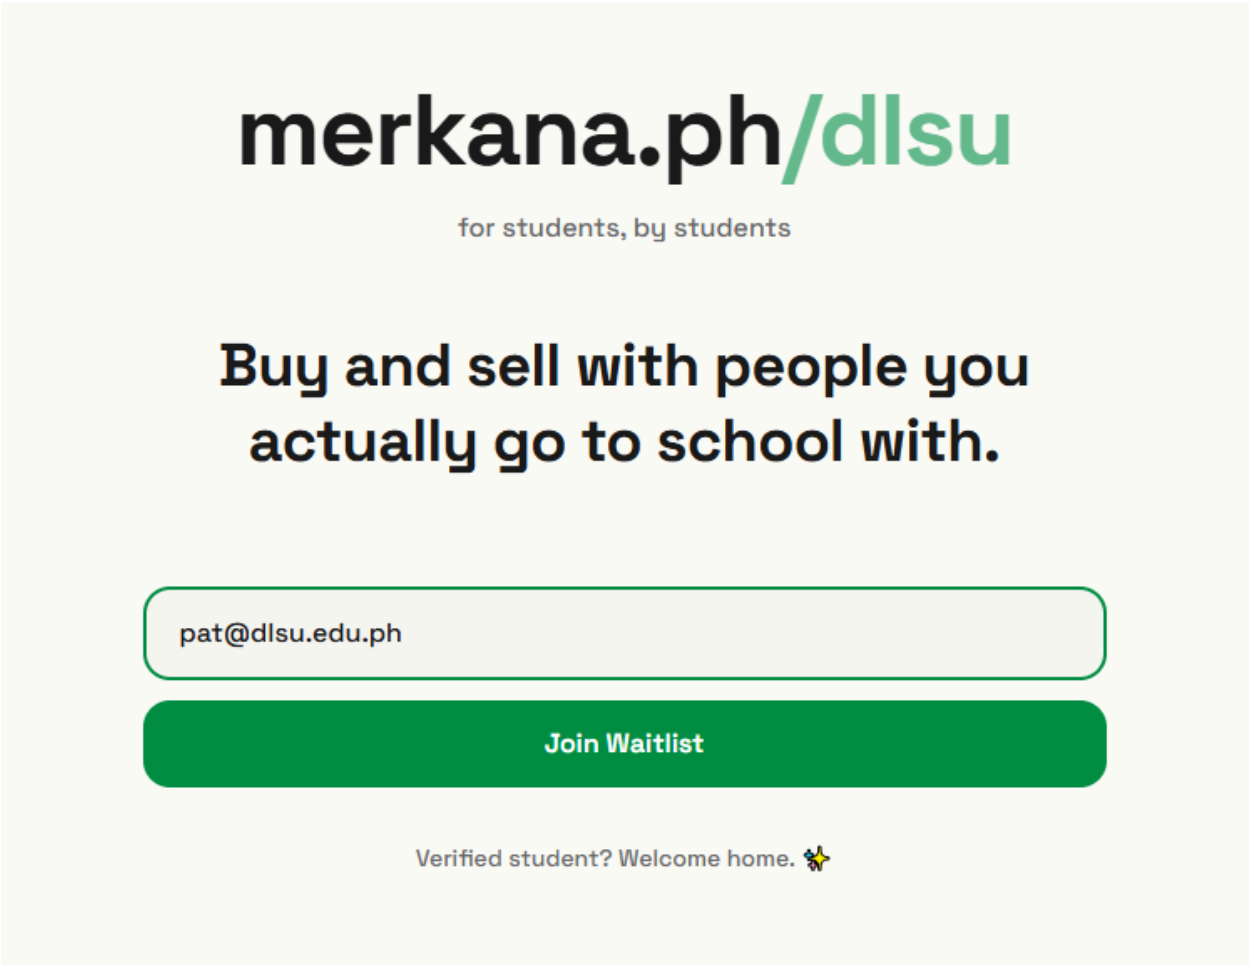
Texture: Subtle grain overlay on the background. Not heavy — just enough to feel physical. Same principle as Merkana's design language.

LAYOUT — sections in order

Section 1 — Hero. Full viewport. Pat's name top-left in monospace, small: `pat naui` all lowercase. Top-right: one live detail in monospace with words that subtly fade in and out, one after the other: `builder · student · founder · data · design`. The center of the hero is dominated by the treated portrait photo — large, taking up 60–70% of the viewport. Over or under it, the bold headline in large display type: `I build things.` Below that, the full

first-person description in smaller body text. One CTA at the bottom: `See my work ↓` — understated, monospace, no button border.

Section 2 — Work. Header: `things I've built` in display type, left-aligned. Two or three project cards. Each card: project name large, one-line description, a visual (screenshot or brand mark), and a small arrow link. merkana.ph gets the first card — use the merkana.ph wordmark and a screenshot of the marketplace:



Leave placeholder slots for future projects. Cards should feel like editorial spreads, not portfolio tiles. Dark card backgrounds with subtle border, or full-bleed images with text overlaid.

Section 3 — About. Not a traditional about section. Split layout — left side: a secondary photo or graphic element (could be abstract, could be a detail shot). Right side: three short paragraphs. First: who Pat is and what she's building. Second: the intersection of art and science — why both matter, why neither alone is enough. Third: what she's currently learning or working toward. Keep it conversational. No bullet points. No skills list with percentage bars.

Section 4 — Currently. A live-feeling section that shows what Pat is actively doing. Three items in a clean grid: 📍 `Building` — merkana.ph. 📚 `Learning` — Python, data science, ML. 📖 `Reading` — So Good They Can't Ignore You, Branding that Means Business. Monospace labels, clean values. This section should feel like a terminal readout — real-time, specific, honest.

Section 5 — Contact. Minimal. One line: `Let's talk.` Below it, two links: email and LinkedIn. No contact form. No social media grid. Just the two most useful links, large enough to be obvious.

Footer. One line: `pat naui · built with intention · 2025` Monospace, centered, small.

INTERACTION AND MOTION

Subtle only. Smooth scroll between sections. On the hero, the portrait photo can have a very slow, almost imperceptible parallax — moves slightly as you scroll. Text fades up on scroll entry — not a dramatic animation, just a 300ms ease-in. The accent color can appear on hover states for links and project cards. No auto-playing animations, no loading screens, nothing that gets in the way of the content.

WHAT TO AVOID

No light backgrounds anywhere. No pastel accents. No rounded card corners beyond 2px. No skills percentage bars or star ratings. No testimonials section. No "hire me" language — Pat is a builder, not a freelancer for hire. No generic stock imagery. No emoji in headlines. Nothing that could appear on a Webflow template marketplace.

TONE OF THE COPY THROUGHOUT

Direct. First person. No fluff. Same voice as the hero description — someone who knows what they're doing and doesn't need to oversell it. If a sentence doesn't need to be there, cut it. The site should feel like Pat wrote it herself at 11pm after a productive day — not like it was written by a copywriter trying to impress.
